Mammoth Hot Springs and Fort Yellowstone

Mt. Everts

Jupiter Terrace

Colonial Hotel and Yellowstone Lake

THAT the Yellowstone Park trip should be made by way of Gardiner Gateway, the Northern and original entrance to Wonderland, those who have been there are generally agreed.

The trip via Gardiner gives the maximum of time at all points of interest. More than that: it is scheduled to bring the Tourist to each point at a convenient hour, when the time of day permits the best inspection of the formations: it allows a full half-day each at Mammoth Hot Springs, at the Upper Basin and Old Faithful Inn, and at the Grand Canyon. It affords ample time for rest, for meals and for social enjoyment at each of the hotels or camps and lunching stations.

The regular trip of five and one-half days through the Park, if made via Gardiner, gives the visitor the utmost of sight-seeing, the utmost of rest, the utmost of recreation possible in that space of time.

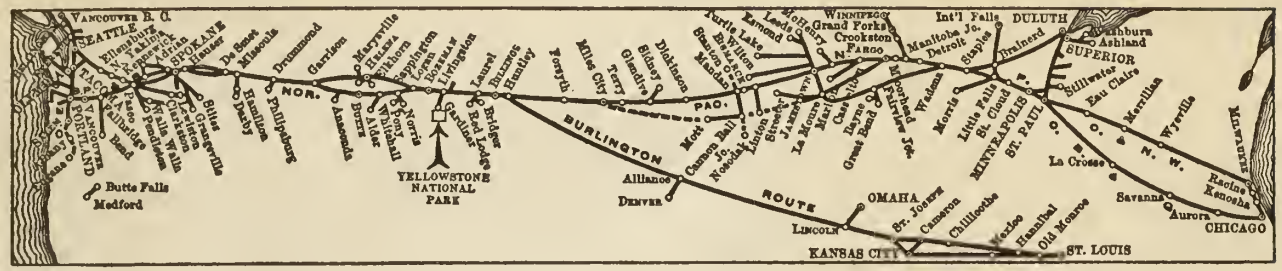
Pullmans run direct between Gardiner Gateway and Minneapolis, St. Paul and Chicago



IN the old frontier days visitors to the Yellowstone Park region, including both white and red men, followed the Upper Yellowstone River because it was the natural and logical route—the one the old trails followed.

The Northern Pacific Railway succeeded the trails, and at Gardiner, on the northern boundary of the park, stands the huge lava arch erected by the Government to designate the entrance to the park and dedicated by President Roosevelt in 1903.

Facing this arch is the railway station, rustic and artistic, at the very threshold of Wonderland, and only five miles from Mammoth Hot Springs and the beantiful painted terraces.

In making plans for a summer vacation, the Yellowstone Park should be seriously considered. It is without question the most unusual and peculiar region in the world. The change of scene found here as compared with other parks and scenic shrines is complete and unique. The park season is a short one, from June 15 to Sept. 15, and the trip is made without the least hardship and in entire comfort, is absolutely devoid of the discomforts and inconveniences often met with in visiting scenic resorts more or less remote from the centers of population, and opens to the sight and mind a view of Nature entirely original and one that cannot be found elsewhere.
